

WHAT IS VOLVO CERTIFIED?

Purchasing Volvo Certified used equipment is a smart investment. You get legendary Volvo quality, performance and reliability in a machine that's thoroughly inspected for years of rugged performance on the most demanding jobsites — and you get it all with incredible savings over buying new.

Volvo Certified used equipment is classified into three categories:

Certified Used Equipment

Machines undergo a 140+ pt. inspection at a Volvo Certified used center and are reconditioned using Volvo-approved parts and components.

Engine Ready Used Equipment

Machines are de-tiered to work in less regulated markets outside the United States and Europe.

Inspected Used Equipment

Machines undergo a 140+ pt. inspection at a Volvo Certified used center. Buyers know the detailed condition of the machine at the time of sale.

Volvo Certified checks all the boxes.
